

Kendal Jensen  
Molecular Pathologist  
Prometheus Laboratories, Sharp Healthcare

To Whom it May Concern:

I was the clinical laboratory director of Amprion Inc. from October 2020 through January 2024, and had the privilege of working alongside John Middleton (JM) for those years. John was the system engineer for Amprion Inc. notable for his strong leadership in the laboratories analytical and clinical validations and systems engineering. Over three years, John demonstrated a thorough understanding of the regulatory environment, including the ability to effectively communicate on any of the guidelines. JM was particularly known for possessing a rich knowledge of engineering. Algorithms developed by JM were always praised at audits by regulatory and accrediting bodies in both manufacturing and pharmaceutical industries. His data was reviewed at CLIA inspections, receiving high praise. JM's analytical insight always proved to be the most accurate, and often more useful than outside consultants. If the answer was not immediately available to JM, the best path forward always was.

JM was a joy for everyone to be around. He received feedback with humility from anyone on our team, and at any level. And while he was extremely down to earth for an engineer with his talent, he never went after attention or praise.

I would happily discuss JM's candidacy for top leadership roles in the biotechnology or laboratory industry. If you hire JM, you must allow him to consult for me for 2 hours per week, because, if you must know, JM is the most trusted consultant. Questions about JM can be submitted to my gmail address at [txcadoc@gmail.com](mailto:txcadoc@gmail.com) or text message to 512-577-9317.

Sincerely,

Kendal Jensen, M.D., Ph.D.

Molecular Genetic Pathologist,

Medical Director
